It's a full-fledge GPS with navigation software with Android Mobile Internet Device (MID). It's known as Volo. Pre-installed with the latest PAPAGO navigation software for Android, Volo guides users from turn to turn by a comprehensive library of Points of Interests (POIs), Junction Views, Lane Assists as well as 3D Buildings and Monuments amongst others.

Volo showing off its 3D landmark feature.

"With the Android Platform and the customized Application, M3POI, in built within the device, the Volo provides users with numerous smart features and richer content that surpasses the standard options provided by other similar devices in today's market," says Lester Neil Francis, Group COO and Executive Director for M3 Group of Companies.

Running on Android ICS, Volo utilises 1GHz CPU, coupled with 1GB internal RAM to multitask. Why multitask? That's because users can log on with their Google account and download apps and games from Google Play.

Volo is capable for performing multimedia services. It can play videos, music and pictures. That includes the support to play high definition video along with clear high quality audio.

At the introductory price of RM649, Volo is available at all authorised dealers of M3Asia; M3 Shop Online Store at www.m3shoppe.com or M3Asia Concept Store. To find out more about M3Asia products, logon to www.m3asia.com or join us at [www.facebook/M3asia](https://www.facebook.com/M3asia).
